Change Management Report:

-We have stated that we will use the waterfall model in our system. This has not changed our thinking.We designed our project to be web-based system. Using php as language did not change our idea.There is no place we changed when we looked generally.

-But some parts of the Project may change over time. We tried to design our system to be open to change.We have prepared 12 use cases for this system.This use case section will not change.

-But we can change or add some parts that we think are content. We used login and logout use case code in the 3rd delivery.For the fourth delivery, we are going to make manipulate customer, manipulate user, search for boks and borrow books in the code part.But this idea may change and other use cases can also be coded.

-The interface designs we show in this assignment may change.A more comprehensive and beautifully visible interface can be designed and added.As the Project group, we defined tasks in the first part.There was no change in the duties of the group members.

-We made sure that every member of the group was informed by the other members of the group.

-In general, the Project continues as planned but we want to reiterate that our system is open to change.
